PROFESSIONAL EXPERIENCE

Full-Stack Freelance Engineer — AMDK Service | UNCTAD Project
July 2023 - November 2025

- Developed the frontend using Next.js, including home, news, newsletter, notification, and dynamic user-focused interfaces.
- Developed backend services with Node.js, including APIs, data integration, and server-side business logic.
- Participated in Agile/Scrum practices, including team coordination, code reviews, sprint planning, and progress tracking.
- Implemented and executed unit and integration tests to ensure code quality and reliability.
- Managed deployment, updates, and operational monitoring of the ReformTracker platform.
- Contributed to the development of a complete web-based solution.

Freelance Full-Stack Developer — Apexiom, Hattingen, Germany
June – September 2025

- Developed a service platform for plumbing, heating, air conditioning, renovation, and sustainable energy services.
- Frontend: Designed dynamic and responsive interfaces using React.js and Tailwind CSS.
- Backend: Developed APIs and secure web services using Java / Spring Boot.
- Implemented a REST architecture for managing customer requests.
- Integrated and deployed the application using Docker and GitHub Actions (CI/CD).
- Designed functional BPMN models to represent the request processing workflow.

Freelance Full-Stack Developer — Safi Vert Nettoyage, Safi
March – June 2025

- Developed internal logistics management applications covering storage, packaging, and traceability.
- Performed UML/Merise analysis and modeling to design software solutions.
- Developed APIs and web services to integrate internal applications.
- Managed project activities using Agile methodology, including sprint tracking and reporting.
- Supported network administration and IT system security.

Freelance Full-Stack Developer, kh-autosolutions — Valenciennes, France
November– March 2025

- Designed and integrated several full-stack web applications for various clients.
- Developed an automotive garage management system, including requirements analysis and UML modeling.
- Developed applications using JavaScript, Next.js, NestJS, and MongoDB.
- Implemented web services for managing quotations and service interventions.
- Integrated APIs to manage customer requests.
- Managed projects using Agile/Scrum methodologies, with iterative delivery and technical documentation.
